INITIAL SETUP

Step 1: Activate Your Account

1. From the Ingram Micro Onboarding Process, an Activation Email will be sent to you.

no-reply@cloudcheckr.com CloudCheckr Activation Email - Welcome to CloudCheckr! We're thrilled to have you with us!

2. Open your email and click Activate Account

3. Set your new password

Set a Password

Please create a password for your account.

Password	<input type="password"/>
Confirm Password	<input type="password"/>
	<input type="button" value="Update"/>

Have questions? Visit our [support site](#), call us at (585) 413-0869, or email us at support@cloudcheckr.com.

4. Sign-off and log back on to verify your credential and password.

CloudCheckr has a platform deployed in three regions. Direct your web browser to one of the following links depending on your country and log-on using your CloudCheckr credentials: app.cloudcheckr.com | eu.cloudcheckr.com | au.cloudcheckr.com

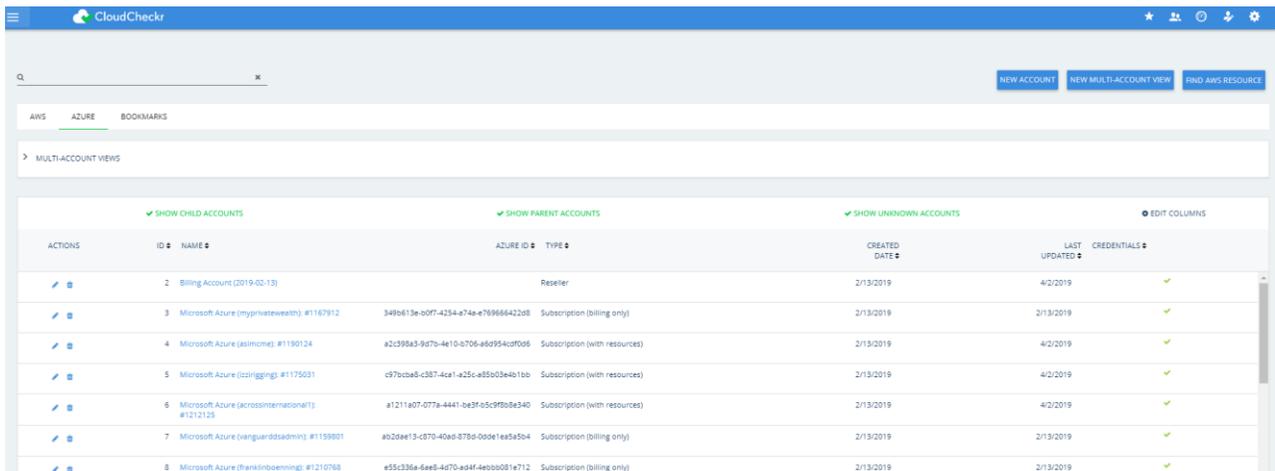

Step 2: Access Billing Accounts (Reseller and Customer)

Most of our resellers and partners require access to a Cloud Cost Management and Optimization Platform. With CloudCheckr, we provide our resellers access to billing, resource usage, best practices, optimization, etc. In CloudCheckr, we can apply the markups offered to resellers based on current Cloud Market Place (CMP) rates. Also, additional features such as invoicing, additional custom charges by resellers can be provided.

Your Billing Accounts are created and configured by Ingram Micro to bring all your end customers subscriptions under your Billing Account.

5. Launch CloudCheckr > Select Azure.

The main page of CloudCheckr should display your Billing Account and your Customer Subscription (billing only) child accounts.

SHOW CHILD ACCOUNTS		SHOW PARENT ACCOUNTS		SHOW UNKNOWN ACCOUNTS		EDIT COLUMNS	
ACTIONS	ID	NAME	AZURE ID	TYPE	CREATED DATE	LAST UPDATED	CREDENTIALS
	2	Billing Account (2019-02-13)		Reseller	2/13/2019	4/2/2019	
	3	Microsoft Azure (myprivatewealth) #1167912	349b613e-b0f7-4254-e74e-4769666422d8	Subscription (billing only)	2/13/2019	2/13/2019	
	4	Microsoft Azure (asimcom) #1190124	a2c398a3-9d70-4e10-b706-e6d954c0f0d8	Subscription (with resources)	2/13/2019	4/2/2019	
	5	Microsoft Azure (icirring) #1175031	c97ccba8-c387-4ca1-a25c-a85b03e4b1bb	Subscription (with resources)	2/13/2019	4/2/2019	
	6	Microsoft Azure (acrossinternational) #1212125	a1211a07-077a-4441-be3f-a5c9f8b8a340	Subscription (with resources)	2/13/2019	4/2/2019	
	7	Microsoft Azure (wanguardtsadmin) #1159801	a62dae13-c870-40a0-876d-0d9e1ea5a504	Subscription (billing only)	2/13/2019	2/13/2019	
	8	Microsoft Azure (Franklinboemng) #1210768	e55c336a-6ae8-4d70-ad4f-ae8b00814712	Subscription (billing only)	2/13/2019	2/13/2019	

Step 3: Subscription Accounts (with Resources) - Optional

For CloudCheckr to fully monitor your Azure deployment, you have two account types to the platform. The first is CSP Billing Only account, which will provide cost data, and this is the Reseller and Customer Billing Account provided by Ingram Micro as shown above.

The second type of accounts will be your Subscription account(s) with resources; the subscription account is an individual account that collects resources if you have Azure Active Directory setup, and will provide you with best practices, inventory, security, and utilization modules in CloudCheckr. This type of account will be created by you.

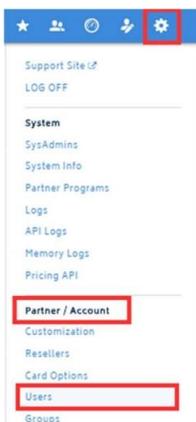

In order to collect resource information for an Azure Subscription, you must configure the appropriate settings in the Azure portal and then provide the Directory ID, Application ID, Subscription ID, and Secret Key in the Account Configuration menu in CloudCheckr.

For detailed information on how to perform these steps, see [Microsoft Azure Configuration – Subscriptions](#).

Step 4: Create Users and Permissions

Ingram Micro Resellers have full control over provisioning and managing user access within their account(s). User access can be configured with specific permissions, rights, and visibility based on the needs and role of the user.

6. **Click on Settings icon and select Partner / Account > Users** (This link is visible only to administrator users)

7. Click on New User

Users

[New User](#) [Back to Accounts](#) [Groups Management](#) Search Email: [Search](#)

Show: [10](#) [25](#) [50](#)

SELECT MULTIPLE	NAME	ROLE	GROUPS	CREATED	LAST LOGIN	ACTIVATED
<input type="checkbox"/>	new.user0@cloudcheckr.com	Administrator		4/27/2018 2:57:28 PM	4/27/2018 3:06:20 PM	Yes
	new.user1@cloudcheckr.com	BasicUser		5/1/2018 3:06:00 PM		Yes
<input type="checkbox"/>	new.user2@cloudcheckr.com	BasicUser		4/27/2018 12:27:18 PM		Yes
<input type="checkbox"/>	new.user3@cloudcheckr.com	BasicUser		4/27/2018 12:27:48 PM		Yes

[Edit Selected Users](#)

8. Type the email address of the user you wish to add and select one of the Roles for the user

New User

Email

i NOTE: You can create multiple users with the same permissions at once. Separate each email address with a comma.

Roles

Select a role for the user(s):

- ReadonlyUser
Anything that requires some sort of saving is not allowed.
- BasicUser
Cannot add, delete nor configure accounts
- BasicPlusUser
Can add, delete and configure accounts, except MAV accounts
- User
Can add, delete and configure all accounts
- Administrator
Can add, delete and configure accounts, access all accounts, edit users

9. For your end customer user, you can grant permission based on subscription. Then Click on Create.

User Permissions

Choose which accounts and reports this user should have access to. If also assigning this user to a group, all access in both the group and on the user will be applied.

Account	Access ¹	Savings	Best Practices	Alerts	Cost Reports ²	Resource Utilization Reports	Inventory	Security	Automation	Edit Emails ⁴	Retail Costs ³	Standard Costs ³	List Costs ³	Trending Reports	Change Monitoring	Account Notification	See Partner Tools ⁵	Edit Partner Tools ⁵	See API Keys ⁶

For detailed information on how to perform these steps, see [CloudCheckr Success Center: User Management](#)

COST REPORTS FOR AZURE

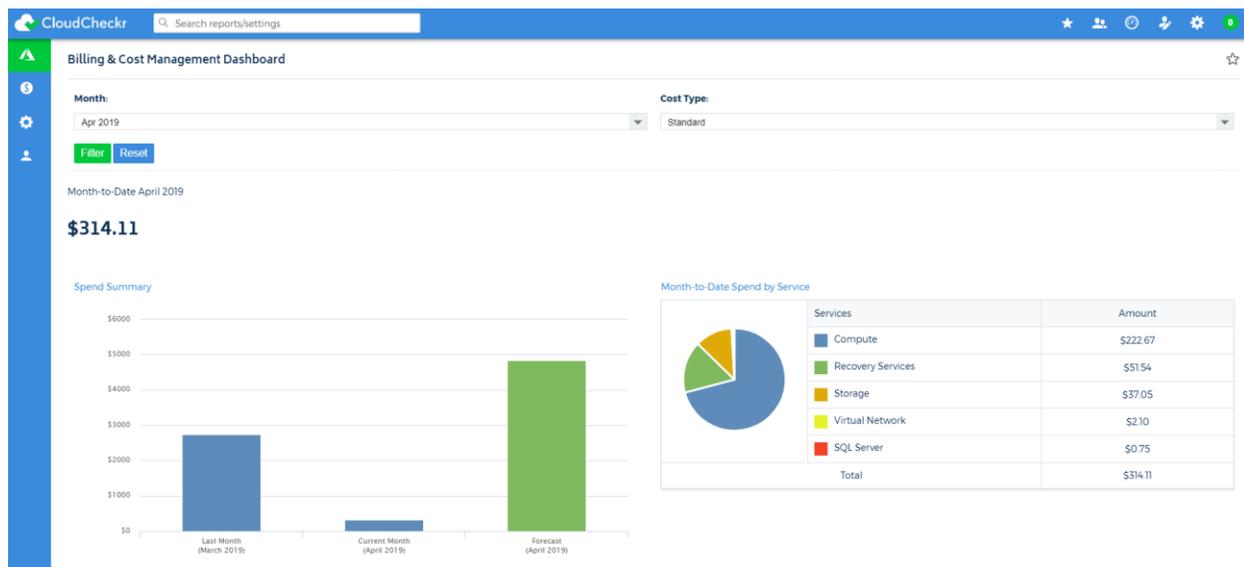

CloudCheckr offers a variety of cost-based reports. CloudCheckr's cost reports will show you how much you are paying for your Azure architecture but they also highlight areas where costs could be better optimized. Billing reports will show your current Azure invoice, how much you have spent on each service, and provide a billing history.

Step 5: Azure Billing - Dashboard

10. Click and open your Billing Account. Select Cost > Azure Billing > Dashboard

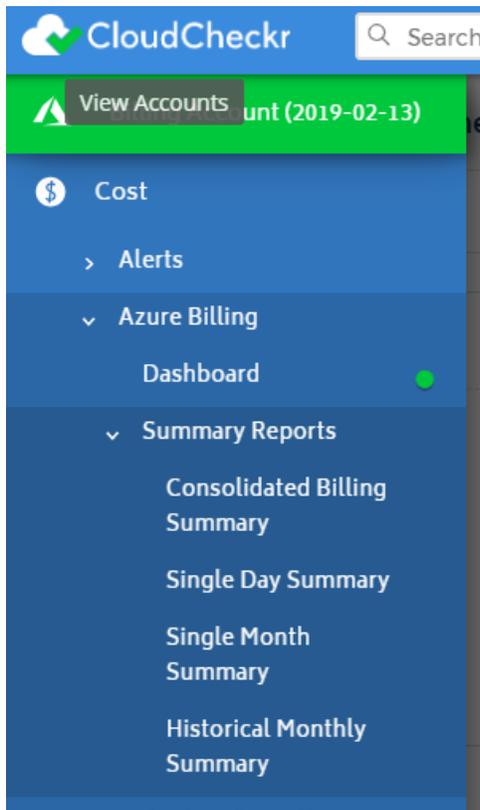

Dashboards provide quick, distilled views of data related to your cloud cost, inventory, utilization, and saved filters. You can choose from more than 30 built-in dashboard panes that you can add to your dashboard view and customize.

This guide will show you how to create dashboards and add and configure panes within a dashboard.

For detailed information on how to perform these steps, see [Create Dashboards.](#)

Step 6: Azure Billing – Summary Reports

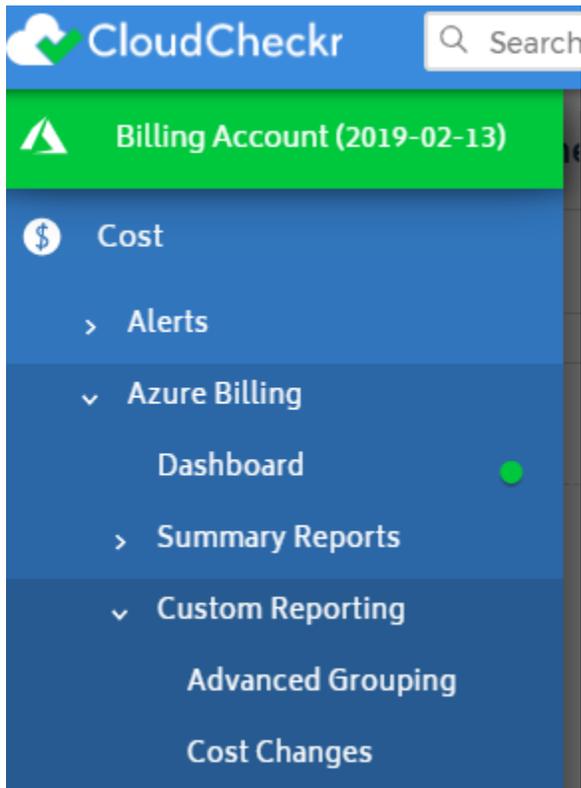

Billing Consolidated Summary Reports

Consolidated Billing Summary Report shows you daily and month-to-date cost for each of the subscriptions within your Azure Enterprise Agreement or Cloud Solution Provider. The totals for this report are taken directly from your Azure usage reports.

Single Day & Monthly Summary Reports

The Single Day and Month Billing Summary Reports show you statistics for a specific date or month on your bill taken directly from your Azure invoice.

Step 7: Azure Billing – Custom Reporting

Advanced Grouping Report

CloudCheckr's Advanced Grouping report is a powerful tool that gives you total flexibility over the cost data in your Azure Detailed Billing Report.

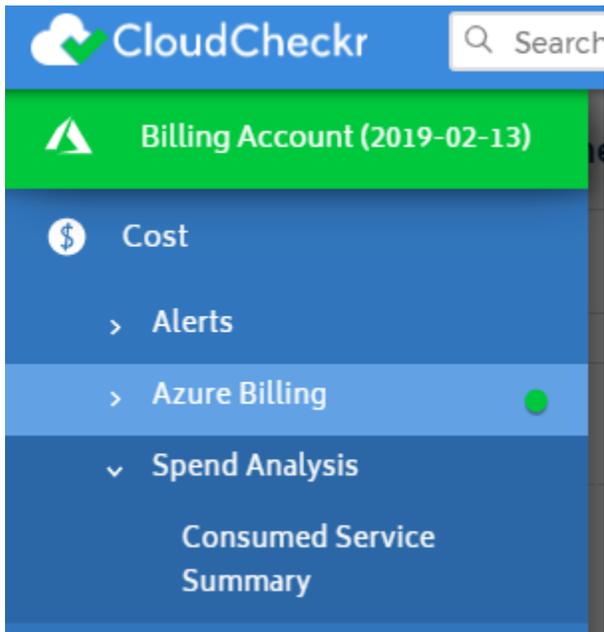

Advanced Grouping allows you to easily pivot your data and costs by multiple levels of Subscription criteria, such as Account, Resource ID, Service, and Tag Keys. For instance, you can group costs by Tag Keys of CustomerName, then further group costs within that by Tag Keys of ProductName. You can create reports of up to five levels of groupings with Tag Keys.

Cost Changes Reports

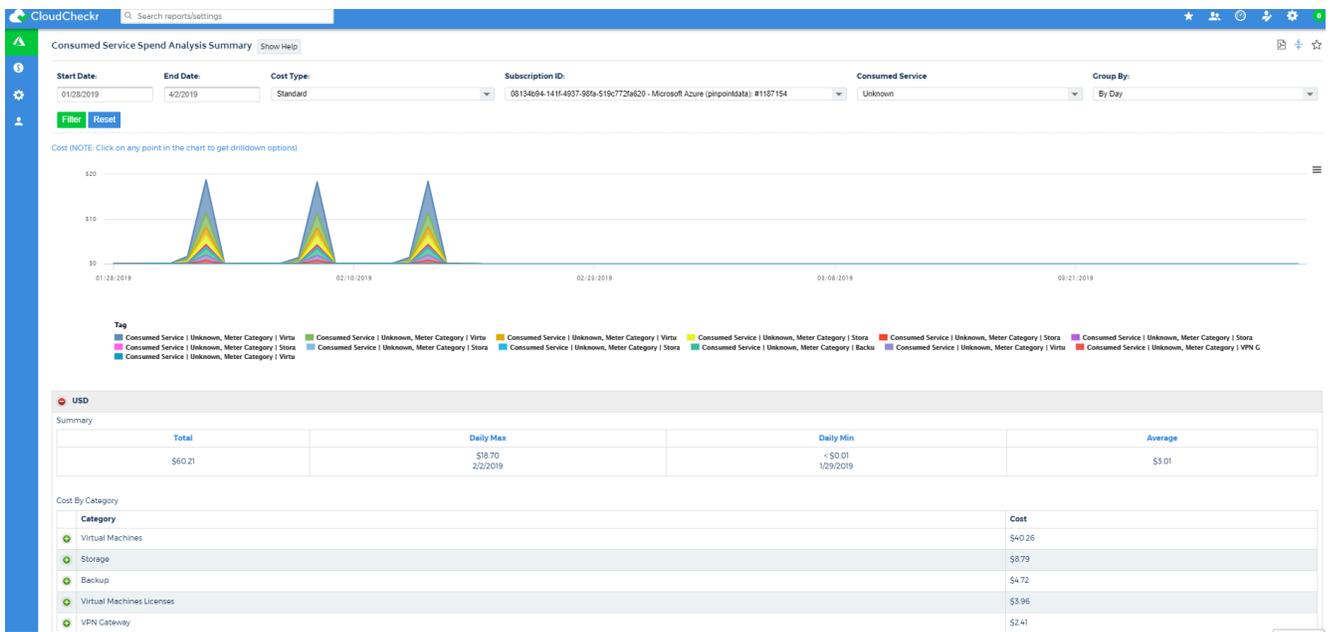

The Billing Cost Changes report is designed to allow CloudCheckr users to quickly identify cost fluctuations between two separate billing periods.

The Billing Cost Changes report is based on cost data obtained from the Azure Detailed Billing Report. When viewing this report within a consolidated payer account inside CloudCheckr you will have the ability to view cost changes across the entire consolidated bill, or for specific payee accounts. When viewing this report within a payee account, you will only be able to see cost changes for that account's usage.

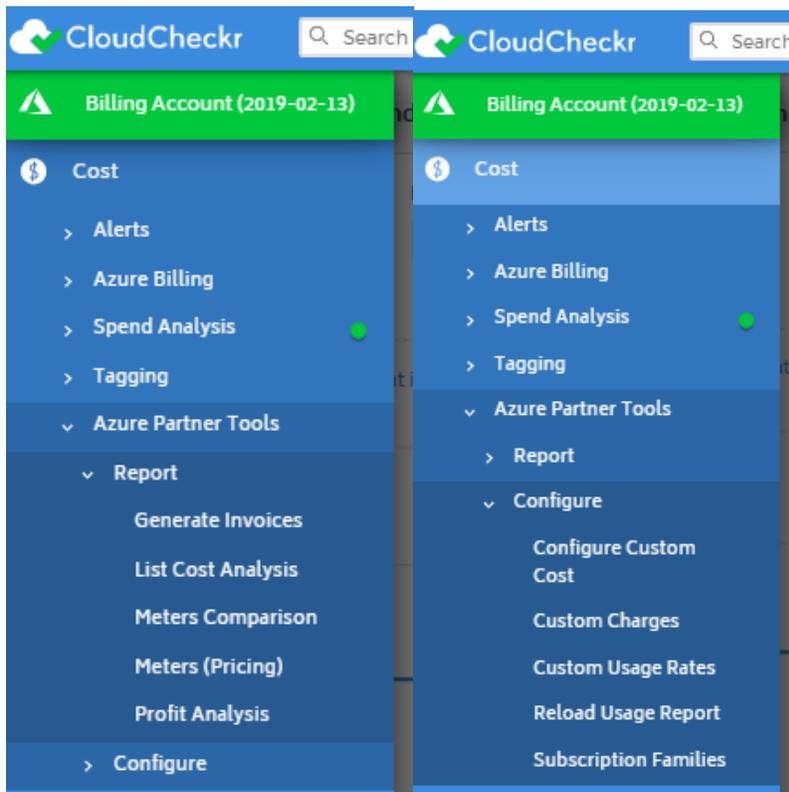

Step 8: Spend Analysis

Spend Analysis reports take information extracted from your Detailed Billing Reports and aggregate it for any time period specified. Summary and Detail reports illustrate all the costs associated with a particular service, while Static Reports take a snapshot of your service deployment and history in order to make an estimate of future usage.

Step 9: Azure Partner Tools

Azure Partner Tools are available in the Enterprise Agreement or Cloud Solution Provider accounts. They help manage complex billing ecosystems. You can create and schedule invoices, determine how reservations are handled, create custom charges and usage rates, and reload usage reports.

List Cost Analysis

Determining List Cost requires a series of complex calculations that can be very difficult to resolve. This report is designed to show you each cost that was changed by CloudCheckr to come up with the List Cost. This report can be used to validate the changes made to determine List Cost.

Custom Charges

Custom Charges allows you to add custom charges into CloudCheckr to ensure your invoices and chargebacks and accurate.

Custom Usage Rates

CloudCheckr allows you to override the usage rates set by Azure. When you set a new rate up with the given filters, CloudCheckr uses those values to calculate a new List Cost of the charge. These changes will not affect the standard cost shown in CloudCheckr, but will only affect the List Cost.

Generate Invoices

The Azure Invoice Generator is designed to allow you to create, and print invoices to your customers and clients based on their Azure usage. This report gives you the flexibility to show different pricing models and makes it easy for resellers and managed service providers to streamline their billing process.

Reload Usage Reports

You will need to reload a billing period's data whenever you make changes to the billing data (such as adding a custom charge). The fastest way to kick off a reload is to click 'Reload' for the month in question, then click 'Run Billing Update Now'. Once the reload is complete, the Process State will say 'Processed' and the Last Processed date will be recent.

Subscription Families

CloudCheckr enables you to group one or more subscriptions into a Subscription Family. This grouping allows you to invoice and report on multiple subscriptions for a single customer. As well, this grouping can be used to limit access and limit visibility for an end user to only their own subscriptions.

You can also use Subscription Families to apply custom charges, discounts, and usage rates to specific customers.

Within the account you setup in CloudCheckr for the Azure Enterprise Agreement or the CSP, you can configure these Subscription Families. Name your Subscription Family and then select the subscriptions that should be treated as a single set of subscriptions.

Customers created in Subscription Families will carry through to the Invoice Generator.
